

# Documentation and BAsic Business Intelligence updates

NaN·tic

Albert Cervera i Areny

# Documentation

Documentation framework based on Sphinx that allows to customer-specific documentation integrated with tryton documentation.

- Extended depending on the modules installed
- Can add field names and other information as translated in tryton
- Creates screenshots

Sphinx plugins:

- <https://pypi.python.org/pypi/trydoc>
- <https://pypi.python.org/pypi/sphinxcontrib-inheritance/>

# Documentation

- Let's use it!
- It's well documented
- NaN·tic already has a full time employee working almost only on creating great documentation (only in Spanish)
- Targeted to processes and questions

# NaN•tic

- Examples

# BASic Business Intelligence

- Users can create their own dynamic tables
- It creates charts
- Quickly create line charts
- Quickly create bar charts
- Quickly create pie charts

# BASic Business Intelligence

- Takes advantage of the new chart colors in 3.4

# BASic Business Intelligence

New stuff:

- It works!
- Scheduler
- Can use celery for running jobs in the background
- Several modules available: babi\_account, babi\_sale\_opportunity...
- We aim to add filters and expressions to our new modules

# BASic Business Intelligence

- (Do not forget to mention it has charts)

# BASic Business Intelligence

- Quick note about gal  
(it's not all about charts, data is important too)

# BAsic Business Intelligence

- Demo (with charts)
